# ***KATALOG CZĘŚCI ZAMIENNYCH***

## ***LUBLIN 3 Mi***

Lublin, październik 2005

**W S T E P**

„Katalog części zamiennych” zawiera wszelkie informacje dotyczące obrotu częściami zamiennymi (serwisowymi) do samochodu LUBLIN 3Mi wersja z silnikiem 4CT90 z pompą Bosch oraz z chłodzeniem powietrza tzw. CTI . Sprzedaż części zamiennych prowadzi Intrall Sp z o. o. - Lublin, ul. Mełgiewska 7/9, tel.(0-81) 7493319, fax.7491578 oraz ASO i Dealerzy na terenie całego kraju. Właściwe korzystanie z Katalogu gwarantuje zamówienie odpowiedniej części.

Przy zamawianiu części zamiennych należy zawsze podawać:

- typ i wersję pojazdu,
- rok produkcji,
- numer części,
- pełną nazwę części wg katalogu,
- żadaną liczbę części.

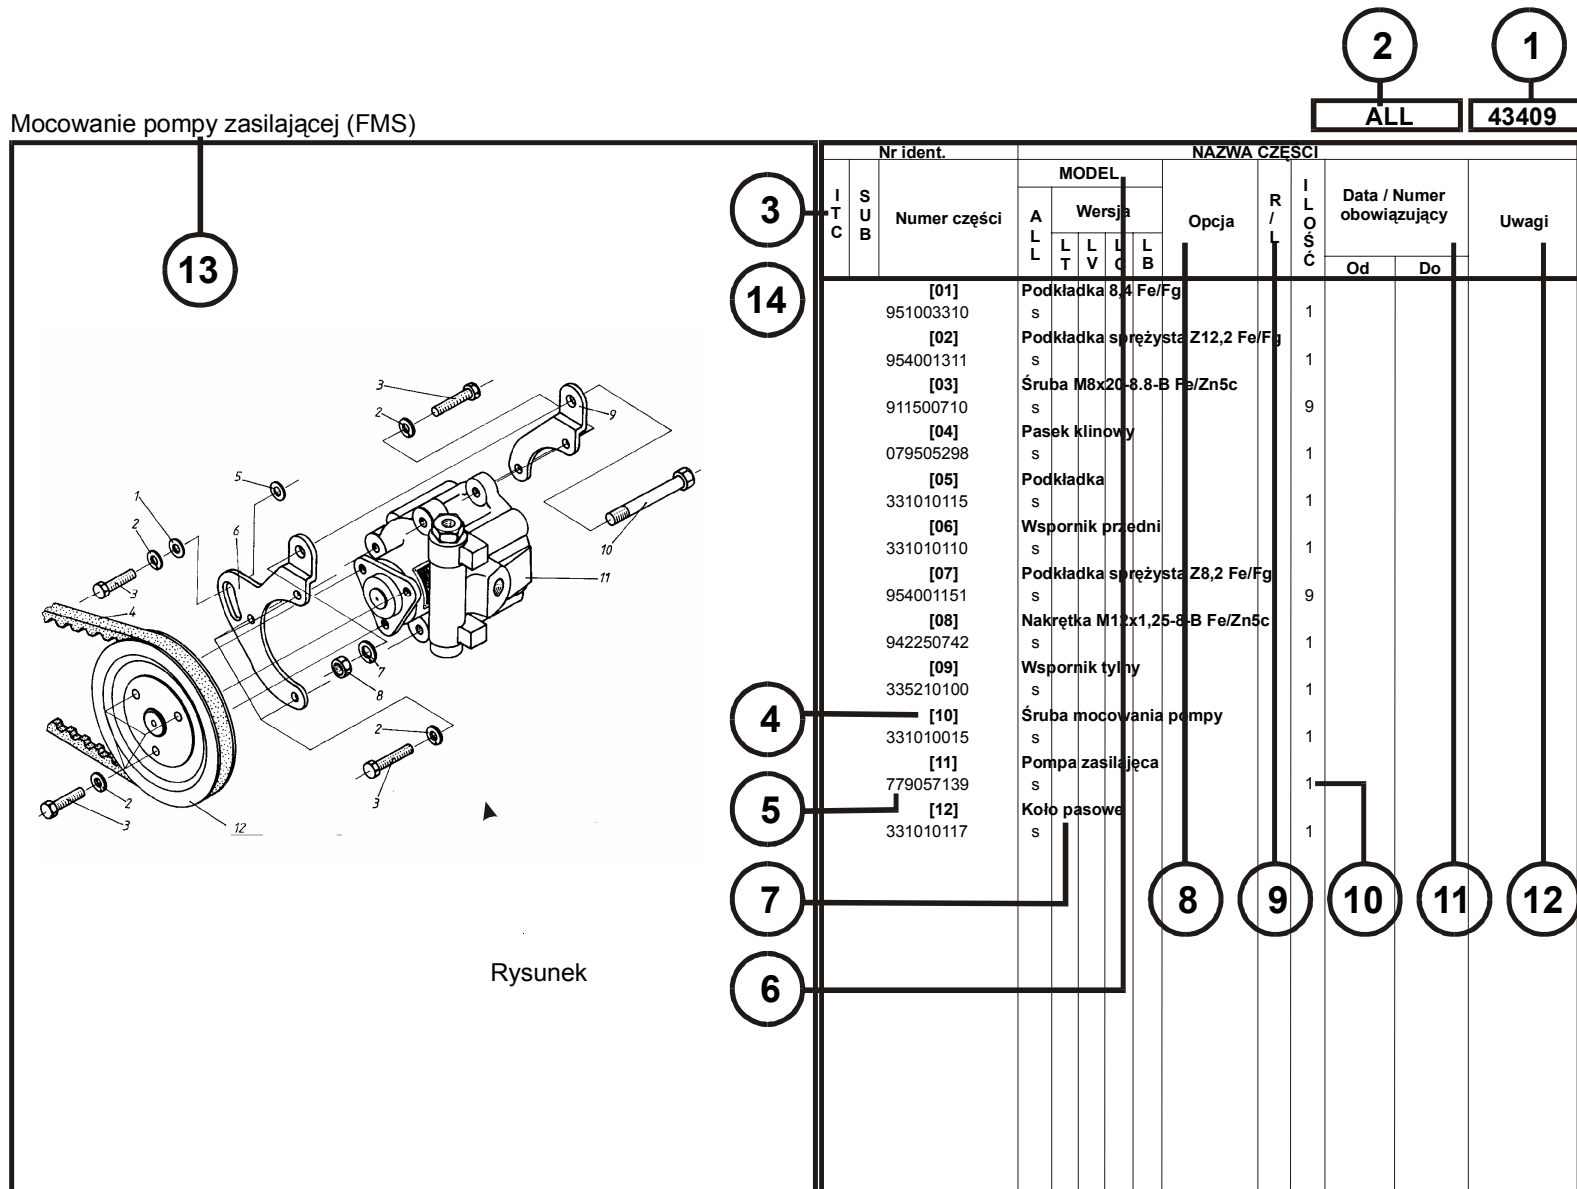

W przypadku wątpliwości należy podać dodatkowo numer produkcyjny silnika lub numer podwozia samochodu, do którego zamawia się daną część zamienną. Aby ustalić właściwe numery części zamiennych ujętych w niniejszym katalogu, należy posłużyć się tablicami rysunkowymi i wykazem części zamiennych katalogu. W tablicach rysunkowych przedstawiono graficznie części zamienne oznaczone kolejnymi numerami (pozycjami). W tej samej tablicy z prawej strony znajduje się wykaz części zespołu. Aby uprościć tablice rysunkowe, nie przedstawiono na rysunku niektórych części. W wykazie części znajdują się numery przyporządkowane danej części.

### A.I. Modele samochodu oraz rodzaje typów i opcje.

**Model:**

**LT**, - samochód track (podwozie z kabiną, skrzyniowy, kontenerowy);      **LV**, - samochód van (furgon, furgon z wysokim dachem);  
**LC**, - samochód kombi ;      **LB**, - samochód minibus (mikrobus);

## A.II. Opis układu strony.

**1 - NUMER GRUPY:**

Pierwsza cyfra określa numer grupy głównej , następne cztery cyfry określają numer podgrupy.

**2 –ALL, SWB & LWB:**

Określa czy dana tablica przedstawia podzespół samochodu o krótkim rozstawie osi, długim, czy też jest wspólna dla obydwu pojazdów.

**SWB** – tablica dla samochodów o rozstawie osi 2900 mm.

**LWB** – tablica dla samochodu o rozstawie osi 3433 mm.

**ALL**– tablica dla obu rodzaju pojazdów.

**3 - ITC:**

Kod zamienności występuje w przypadku zmiany numeru części w wyniku jej modernizacji. Określa on możliwość zamiany części na część o numerze zmienionym. Kody zamienności:

**Y** - Część nowa i stara są całkowicie zamienne,

**N** - Część nowa jest niezamienna ze starą,

**O** - Część nowa jest zamienna z inną nową częścią,

**W** - Część nowa jest zamienna ze starą (różni dostawcy).

**4 - NUMER IDENTYFIKACYJNY:**

Numer identyfikacyjny odpowiada numerowi części na ilustracji podgrupy. Numery te nie muszą występować w kolejności.

**5 - NUMER CZĘŚCI:**

Każda część posiada własny numer. Części oznaczane jako "**n/s**" (kolumna Uwagi) nie występują osobno lecz w podzespole lub zestawie.

**6 - MODEL:**

| MODEL       |        |   |   |   |
|-------------|--------|---|---|---|
| A<br>L<br>L | WERSJA |   |   |   |
|             | L      | L | L | L |
|             | T      | V | C | B |

Określa modele samochodu oraz jego wersję.

**LT** - samochód truck (podwozie z kabiną, skrzyniowy, kontenerowy);

**LV** - samochód van (furgon, furgon z wysokim dachem);

**LC** - samochód kombi;

**LB** - samochód minibus (mikrobus);

**ALL** - dotyczy wszystkich podstawowych wersji

Kolumna ta określa stosowanie danej części:

**s** : wyposażenie standartowe;

**o** : wyposażenie opcjonalne;

**a** : wyposażenie dostępne w zestawach zależnie od regionu;

**7 - NAZWA CZĘŚCI.****8 - OPCJA:**

Ta kolumna zawiera kody opcji. Kody opcji są podane w tabeli „Kody opcji wyposażenia”

**9 - L / R:**

Ta kolumna określa stronę mocowania części:

**L** - lewa,

**R** - prawa.

**10 - ILOŚĆ:**

Ta kolumna określa ilość części wymaganych w danej podgrupie. Ilość ta jest określona liczbą. Gdy w kolumnie "Uwagi" występuje "wg" , ilość części należy stosować według potrzeb.

**11 - DATA OBOWIĄZUJĄCA:**

Ta kolumna określa datę produkcji części (podany jest rok miesiąc i dzień), symbol (SOP) lub numer podwozia, nadwozia, silnika.

**12 - UWAGI:**

Informacje dodatkowe. Kody uwag są podane w tabeli „Kody opcji wyposażenia”

**13 - NAZWA PODGRUPY:**

Określa nazwę podgrupy w ramach grupy głównej.

**14 - SUB:**

Określa czy dana część jest ukazana na rysunku.

**V** - część nie jest ukazana na rysunku.

### A.III. Kody opcji wyposażenia.

**B.I. Indeks nazw grup głównych**

- 1     Silnik**
- 2     Układ dolotowy, paliwowy, wydechowy i chłodzenia**
- 3     Sprzęgło i skrzynia biegów**
- 4     Podwozie**
- 5     Wyposażenie elektryczne**
- 6     Nadwozie**
- 7     Wnętrze**
- 8     Ogrzewanie i klimatyzacja**
- 9     Akcesoria i wyposażenie**

## B.II. Indeks nazw podgrup

|              |                                            |         |
|--------------|--------------------------------------------|---------|
| <b>11000</b> | SILNIK WYSOKOPRĘŻNY (4CT190 i 4CT90)       | SWB&LWB |
| <b>11002</b> | ZAWIESZENIE SILNIKA (4CT190 i 4CT90)       | SWB&LWB |
| <b>11022</b> | KADŁUB SILNIKA (4CT190 i 4CT90)            | SWB&LWB |
| <b>11023</b> | GŁOWICA KOMPLETNA (4CT190 i 4CT90)         | SWB&LWB |
| <b>11024</b> | MISKA OLEJU (4CT190 i 4CT90)               | SWB&LWB |
| <b>11025</b> | TŁOKI I KORBOWODY (4CT190 i 4CT90)         | SWB&LWB |
| <b>11026</b> | WAŁ KORBOWY (4CT190 i 4CT90)               | SWB&LWB |
| <b>11027</b> | NASADA I POKRYWA GŁOWICY (4CT190 i 4CT90)  | SWB&LWB |
| <b>11028</b> | UKŁAD CHŁODZENIA OLEJU (4CT190 i 4CT90)    | SWB&LWB |
| <b>11029</b> | OSŁONA PASA ZĘBATEGO (4CT190 i 4CT90)      | SWB&LWB |
| <b>11030</b> | POMPA PODCIŚNIENIOWA (4CT190 i 4CT90)      | SWB&LWB |
| <b>11031</b> | POMPA OLEJU ROTACYJNA (4CT190 i 4CT90)     | SWB&LWB |
| <b>11033</b> | NAPINACZ PASKA ZĘBATEGO (4CT190 i 4CT90)   | SWB&LWB |
| <b>11035</b> | KOLEKTORY Z ZAWOREM EGR (4CT190 i 4CT90)   | SWB&LWB |
| <b>11038</b> | WTRYSKIWACZ (4CT190 i 4CT90)               | SWB&LWB |
| <b>11040</b> | NAPĘD POMPY WTRYSKOWEJ (4CT190 i 4CT90)    | SWB&LWB |
| <b>11045</b> | ZESTAW USZCZELEK (4CT190 i 4CT90)          | SWB&LWB |
| <b>21110</b> | STEROWANIE POMPY WTRYSKOWEJ                | SWB&LWB |
| <b>21121</b> | POMPA WTRYSKOWA I OSPRZĘT (4CT190 i 4CT90) | SWB&LWB |
| <b>21125</b> | TURBOSPRĘŻARKA (GT1749S)                   | SWB&LWB |
| <b>21130</b> | FILTR PALIWA (BOSCH)                       | SWB&LWB |
| <b>21131</b> | ZBIORNIK PALIWA                            | SWB&LWB |
| <b>21133</b> | PRZEWODY PALIWA (4CT190 i 4CT90)           | SWB&LWB |
| <b>21137</b> | FILTR POWIETRZA                            | SWB&LWB |
| <b>21210</b> | UKŁAD WYDECHOWY (4CT190 i 4CT90)           | SWB&LWB |

|              |                                                 |         |
|--------------|-------------------------------------------------|---------|
| <b>21218</b> | OSŁONA AKUSTYCZNA SILNIKA                       | SWB&LWB |
| <b>21304</b> | UKŁAD CHŁODZENIA POWIETRZA                      | SWB&LWB |
| <b>21305</b> | UKŁAD CHŁODZENIA SILNIKA                        | SWB&LWB |
| <b>21308</b> | POMPA WODY (4CT190 i 4CT90)                     | SWB&LWB |
| <b>31602</b> | PEDAŁ SPRZĘGŁA                                  | SWB&LWB |
| <b>31603</b> | SPRZĘGŁO DO SILNIKA 4CT190 i 4CT90              | SWB&LWB |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |             |           | A<br>L<br>L  | WERSJA |    |    |       |             |                       |
